V.

Novelty.

1. The subject-matter of the present claims is neither disclosed in nor fairly suggested by the prior art on record.
2. In particular, the protective layer according to the invention as defined e.g. in claim 1 excludes the presence of graphite and/or Ni-coated graphite and/or the sulphates/phosphates/fluorides present in the iron oxide based surface layer disclosed in US-A-3 747 944.

Inventive step.

1. Unlike the present invention, US'944 pertains to the technical field of dry lubricated materials and therefore its teachings, even modified, cannot be imported into the field of molten salt electrolysis.
2. Having regard to the technical effects mentioned at e.g. p.5, l.22-37, the provision of a crack-free, hematite-based protective layer or body, as explicitly or implicitly defined in the present independent claims, which inhibits diffusion of e.g. Ni to and from the metal-based substrate justifies the acknowledgment of an inventive step.
